

GET IN THE LOOP

# WHAT IS A HEARING INDUCTION LOOP?

There are many places where hearing is challenging and those environments make it difficult or impossible for people with an aided hearing handicap to hear. These people will either have a difficult time hearing in or avoid these environments.

- Hearing Induction Loops are to people with hearing aids what wi-fi is to computers and cell phones
- Hearing Induction Loops bring people who have a hearing loss, and who wear hearing aids, back into the environments of sound
- Simply turn your hearing aid to the T-Coil mode

THIS SYMBOL tells people with hearing aids that they can get in the loop to hear entertainment or activities and "Join the Conversation".
